

DDR-SGM report

Computer Vision Final Project

Lingyu Zhang 16/6/2020
Instructor Prof. Yang Li

Contents

- Intro: Stereo Vision & Disparity
- Costs
- Cost Aggregation
- L-R check
- DDR-SGM
- Other Ideas (a new cost, a new evaluation method)

Intro: Stereo Vision & Disparity

- Depth - Disparity
- Disparity - Stereo Vision

SGM

- Match corresponding points
- Computing disparity
- Smooth

Point Matching — Costs

Costs

- BT

$$\bar{d}(x_i, y_i, I_L, I_R) = \max\{0, I_L(x_i) - I_{max}, I_{min} - I_L(x_i)\}.$$

Birchfield, Tomasi Depth Discontinuities by Pixel-to-Pixel Stereo 1998 IEEE

11x11	58.7	0.363	0.374
13x13	63.5	0.377	0.388

Smoothing — Cost Aggregation

Cost Aggregation

$$E(D) = \sum_p C(p, D_p) + \sum_{q \in N_p} P_1 T[|D_p - D_q| = 1] + \sum_{q \in N_p} P_2 T[|D_p - D_q| > 1]$$

Cost Aggregation Results

	PATH	Runtime	Bad4	Bad2
	NO CA	61.3	0.127	0.132
	4 PATH A	106.8	0.085	0.089
	4 PATH B	94.7	0.086	0.091
	8 PATH	126.9	0.080	0.084

L-R check

- SGM based on Left image + SGM based on Right image
- for i, j in Left image:
 - if $|d_{\text{left}_{ij}} - d_{\text{right}_{ij}}| > 1$, set $d_{\text{left}_{ij}} = \text{invalid}$

L-R check Result

no LR check

with LR check

DDR — For Sequences

DDR-SGM

- image -> video
- temporal correlation between frames
- improve computational efficiency
- Search range_{t_ij} = [d_{t-1_ij} - R_{range} , d_{t-1_ij} + R_{range}]
- Recompute SGM at points where L_r exceeds threshold

DDR-SGM

- Cost Aggregation: new path

DDR-SGM

- Cost Aggregation: new path

DDR-SGM Results

- $TH = 10$
- $R \text{ range} = 20$
- $D \text{ range} = 64$
- $\text{Window size} = 11$
- $p1 = 0.6$
- $p2 = 2.5$
- $\# \text{ Frames} = 70$

DDR-SGM Results

Method	Runtime/F	avrBad4	avrBad2
SGM	70.8	0.022	0.156
DDR-SGM	55.8	0.028	0.184

Other Ideas

Other Ideas I — “Neighbor Range” Cost

逻辑判断

Other Ideas I — “Neighbor Range” Cost

Other Ideas II — “Differential Weighed” Evaluation

关注细节：

For p_{ij} in dis_map

$weight(i,j) = diff_mask (GT(p_{ij}))$

$cost_ij = weight(i,j) * (GT(p_{ij}) - dis_map(p_{ij}))$

$cost = sum(cost_ij)$

Thank You
